FIRE ACTIVITY

INLAND REGION (Continued)

Carr, Vegetation Fire, Shasta County (Continued)

Animal Shelters

- Trinity County Animal Control is assisting

Critical Infrastructure

- Redding Electric – Residents without power 8,000
- Pacific Gas & Electric – Residents without power 3,207 and 170 without gas
- Dams
 - Shasta, Keswick, Carr and Clear Creek Dam operations and facility communications are down as of 0400 hrs, because of the fire activity, and all facilities have been evacuated for safety reasons. BOR set outflows to meet environmental and habitat requirements. Due to the fire, BOR is not generating power at any of the power plants within the affected area. Additionally, power lines are down at Keswick and Shasta dams due to the fire and BOR is currently working to replace them. BOR will be working closely with safety/partner agencies to return to the facilities as soon as possible. Additional updates will be provided as information becomes available.
- Amtrak Service
 - The Coast Starlight trains which operate between Los Angeles and Seattle have been amended; northbound trains are operating Los Angeles to Sacramento only, and southbound trains are operating Seattle to Klamath Falls, OR only, no alternate transportation being provided.
- AT&T
 - 1 site down, 2 sites offline, one confirmed burned over.
 - Whiskeytown is offline, but unknown reason because unsafe conditions. West Redding is burned over and offline. We are prepping to bring in a temporary COW and new transport, once it is safe to return to the area.
 - AT&T is working on adding more capacity and optimizing the site covering the Redding Airport.
- TCOM: MIGU-3 Deployed in Support of State Staging Area at Redding Airport.
- Iron Mountain Superfund Site
 - Iron Mountain Mine is impacted and the treatment plant is currently running on generators. They are in touch with Cal Fire and they had two engines at the facility last night, defending the treatment plant. The plant represents about a \$500M investment for EPA, so we consider it a high priority asset and have communicated that to the Carr Fire UC.
 - Iron Mountain has about 10 day capacity to hold AMD and there is also a lot capacity above the Spring Creek Debris Dam. SPDD gates are now closed. If there has to be a release from the SCDD, BLM will meter the release so that impacts to the upper Sacramento are mitigated as much as possible

FIRE ACTIVITY

WEATHER OF CONCERN

Weather of Concern

Northern California:

- Poor overnight recovery again for tonight and tomorrow night with valley minimums around 65-75, with values closer to 75 around Redding. Relative humidity, during the day, will be 5 to 15 percent, with values of 30-40 percent overnight. Winds will be southwest to northwest at 5-10 mph with gusts to 15 mph. However, stronger local northwest gusts associated with the Carr fire are expected tonight and tomorrow night from the west-northwest.

Southern California:

- Inland temperatures will be 110-115 with 85-95 closer to the coast through the weekend. The most critical fire weather conditions will be across interior San Luis Obispo County, mountains and the Antelope Valley.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

VERY Hot and Dry with Poor Overnight RH Recovery Inland from the Coast through the Weekend, then Gradual Cooling SW-NW Gusts 25-35 mph through Coast Range Gaps and Passes into Western Sacramento Valley Each Afternoon through Night through Sunday Strong high pressure will continue producing hot and dry conditions throughout Northern California through the weekend, except along the immediate coast. Winds aloft are light, but at the surface local winds associated with the thermal low and the sea breeze are making it difficult to control ongoing wildfires. Each day through Sunday from the late afternoon hours until around midnight SW-NW winds through the gaps and passes in the coastal mountains and into the west side of the Sacramento Valley will gust to 25-35 mph, and relative humidity (RH) recovery in these areas is only to 25-40%. These winds gradually weaken from midnight until sunrise, then start up again in the afternoon. Inland temperatures will peak at 8-12 degrees above normal with minimum RH 5-15% in the drier areas.

On Monday and Tuesday the high will shift a bit farther east and a light SW flow aloft will develop. The marine layer will deepen and move a bit farther inland each afternoon with a stronger onshore flow. Temperatures will cool a bit, but still reach 5-9 degrees above normal. There is a better chance that the delta breeze will reach the northern Sacramento Valley with higher humidity Mon/Tues. On Wednesday the high will weaken as a low pressure trough in the Pacific NW pushes south. A stronger westerly flow can be expected, along with higher humidity, cooler temperatures and better overnight RH recovery.

SOUTHERN CALIFORNIA

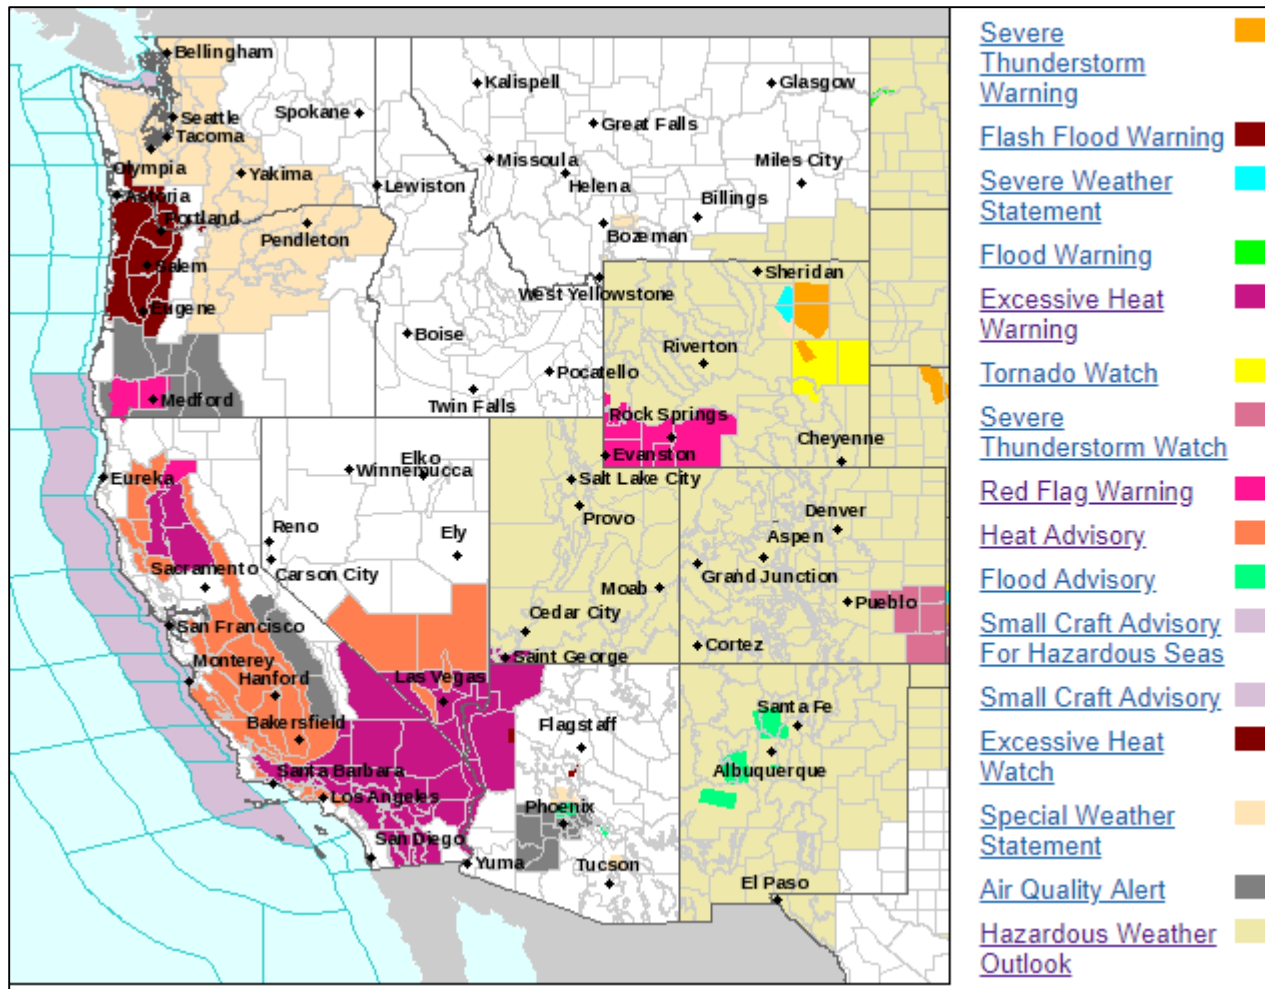

Isolated thunderstorms through Saturday and then scattered thunderstorms Sunday through the middle of next week

Hot through the middle of next week

Minor amounts of moisture moving around the strong high over the Desert Southwest will continue to bring isolated afternoon showers and wet thunderstorms to the Sierra Crest and Northern Deserts as well as the mountains and higher desert locations of Southern California east of the Cajon Pass through Saturday. Moisture will increase starting Sunday over Southern California and Monday over Central California bringing scattered afternoon showers and thunderstorms to these same areas. The shower and thunderstorm threat will come to an end late next week as high pressure weakens and the flow aloft becomes westerly. Temperatures will be 5 to 10 degrees above normal through Wednesday, with mid-80s to mid-90s across the mountains and mid-90s to 108 in the valleys. Minimum humidity will be mainly in the teens away from the coastal areas through Saturday. Humidity will increase and be above 20% across Southern California starting Sunday and above 20% over the Sierra starting Monday. Minimum humidity will be mainly in the single digits and teens across the interior portions of the Central Coast through the end of next week. Temperatures will cool to near or a little above normal by the end of next week as the high pressure over the Desert Southwest weakens. Westerly afternoon and evening winds of 20 to 30 mph with gusts to 50 mph will surface across the desert passes late next week.
